

PARASOUND

Instructions for mounting two half-width products side-by-side using the ZRK rack mount kit. This kit works with both Z Custom and ZoneMaster products.

Steps to Rack Mount Two Units Side-by-Side

- 1) Remove the feet from both units as needed.
- 2) Install the 4 brackets A, B, C and D using two screws per bracket as shown in the diagram. All labels should face out. Only use the screw holes with arrows.
- 3) Connect the two units by bringing brackets B and C together and secure with two screws on the front and two screws on the back. **Note:** Brackets B and C fit very tightly together. You may need to angle the two units as you bring them together. See figure 1 below.
- 4) Mount the units in the equipment rack using plastic insulated “shoulder” washers to reduce the chance of ground loops caused by chassis to chassis contact with other equipment in the rack.

Steps to Rack Mount a Single Unit

- 1) Remove the feet from the unit as needed.
- 2) Install bracket C and D using two screws per bracket as shown in the diagram. All labels should face out. Only use the screw holes with arrows.
- 3) Attach the blank panel extender to bracket C using two screws. **Note:** You can reverse the side the unit is mounted by following figure 2 below.
- 4) Mount the unit in the equipment rack using plastic insulated “shoulder” washers to reduce the chance of ground loops caused by chassis to chassis contact with other equipment in the rack.

Recycle These Unused Pieces:

Bracket A
Bracket B
Extra Screws
